Go to the cf_home.html file in your HTML editor. Within the document head, create a link to the cfjset.css, d_layout.css, and cLeffects.css style sheets. Take some time to study the content and structure of the document. Pay special note to the nested div elements in the center section of the page; you will use these to create a 3D cube design.

Bachelorarbeit aus dem Jahr 2009 im Fachbereich Ingenieurwissenschaften - Maschinenbau, Note: 1,0, Hochschule Mannheim, Sprache: Deutsch, Abstract: Diese Arbeit beschäftigt sich mit der Strömungstechnik. Als Beispiele werden die Strömungen der Raketendüse, in einem Ölabscheider und Aerodynamik eines Tragflügels simuliert. Die Zielsetzung dieser Arbeit ist, zunächst die Software zu erlernen und die Zuverlässigkeit des Programms zu testen. Dies erstreckt sich von der Vernetzung, die sinnvollen Aufbringung von Randbedingungen auf das zu berechnende Strömungsfeld, bis hin zur Berechnung und der anschließenden Darstellung der Ergebnisse. Die Geometrie wird allerdings erst in Pro-Engineer oder einem ähnlichen Programm erzeugt und dann in CFdesign importiert. Die Bedienung dieses Programms setzt also CAD-Kenntnisse voraus. Zur Validierung der numerischen Ergebnisse werden Handberechnungen durchgeführt und die beiden Ergebnisse miteinander verglichen. Um die Zuverlässigkeit der Handberechnungen zu gewährleisten, werden zusätzlich die qualitativen Lösungen aus der Literatur herangezogen. Numerische Simulationen finden in den ingenieurwissenschaftlichen Bereichen immer mehr an Bedeutung, da sich die Leistungsfähigkeit bei gleichzeitiger Verbesserung der Softwarebedienung stetig steigert. Die im Rahmen der Arbeit angewandte Software CFdesign kann Berechnungen im Bereich der Strömungssimulation durchführen. Die Wirtschaftlichkeit der numerischen Berechnungen gegenüber zeit- und kostenaufwendigen Versuchen hat sich erheblich erhöht.

This third edition of Green Buildings Pay presents new evidence and new arguments concerning the institutional and business case that can be made for green design. The green argument has moved a long way forward since the previous edition, and this fully updated book addresses the key issues faced by architect, engineer and client today. Green Buildings Pay: Design, Productivity and Ecology examines, through a range of detailed case studies, how different approaches to green design can produce more sustainable patterns of development. These cases are examined from three main perspectives: that of the architect, the client and the user. Completely revised with all new chapters, cases, sections and introductory material the third edition presents: over 20 new researched case studies drawn from the UK, Europe and the USA, written in collaboration with the architects, engineers, clients and user groups examples of office and educational buildings of high sustainable and high architectural quality an exploration of the architectural innovations that have been driven by environmental thinking, such as the new approaches to the design of building facades, roofs, and atria cases which demonstrate current practice in the area of energy/eco-retrofits of existing buildings documentation of the benefit impact assessment schemes such as LEED and BREEAM have had upon client expectations and on design approaches over the past decade beautiful full color illustrations throughout. In the fast evolving arena of green building, the book shows how architects are reshaping their practices to deal with ever more demanding energy standards and better informed users and corporate clients.

This book constitutes the refereed proceedings of the Third Asia Information Retrieval Symposium, AIRS 2006. The book presents 34 revised full papers and 24 revised poster papers. All current issues in information retrieval are addressed: applications, systems, technologies and theoretical aspects of information retrieval in text, audio, image, video and multi-media data. The papers are organized in topical sections on text retrieval, search and extraction, text classification and indexing, and more.

Explorations in Automatic Thesaurus Discovery presents an automated method for creating a first-draft thesaurus from raw text. It describes natural processing steps of tokenization, surface syntactic analysis, and syntactic attribute extraction. From these attributes, word and term similarity is calculated and a thesaurus is created showing important common terms and their relation to each other, common verb--noun pairings, common expressions, and word family members. The techniques are tested on twenty different corpora ranging from baseball newsgroups, assassination archives, medical X-ray reports, abstracts on AIDS, to encyclopedia articles on animals, even on the text of the book itself. The corpora range from 40,000 to 6 million characters of text, and results are presented for each in the Appendix. The methods described in the book have undergone extensive evaluation. Their time and space complexity are shown to be modest. The results are shown to converge to a stable state as the corpus grows. The similarities calculated are compared to those produced by psychological testing. A method of evaluation using Artificial Synonyms is tested. Gold Standards evaluation show that techniques significantly outperform non-linguistic-based techniques for the most important words in corpora. Explorations in Automatic Thesaurus Discovery includes applications to the fields of information retrieval using established testbeds, existing thesaural enrichment, semantic analysis. Also included are applications showing how to create, implement, and test a first-draft thesaurus.
