Apollonius of Perga (Greek:

; Latin: Apollonius Pergaeus; c.240 BC – c.190 BC) was an Ancient Greek geometer and astronomer known for his work on conic sections.

Beginning from the contributions of Euclid and Archimedes on the topic, he brought them to the state prior to the invention of analytic geometry.

To illustrate how far Apollonius had taken geometric constructions beyond that of Euclid's Elements we consider results which are known to have been contained in Tangencies. In the Elements Book III Euclid shows how to draw a circle through three given points. He also shows how to draw a tangent to three given lines.

Euclid (330 B.C. – 275 B.C.) Greek mathematician. Together with Archimedes and Apollonius of Perga, after him, Euclid was soon included in the triad of the great mathematicians of Antiquity. However, in light of the immense influence that his work would exert throughout history, it must also be considered as one of the most illustrious of all times.
